

Audio System Upgrade Package 2005-2007 Chrysler 300C 2005-2007 Dodge Charger 2005-2007 Dodge Magnum 2006-2007 Dodge Ram Regular Cab 2006-2007 Dodge Ram Quad Cab 2007 Dodge Caliber 2007 Jeep Compass 2005-2007 Jeep Grand Cherokee 2006-2007 Jeep Commander Operating and Installation Instructions

#### **TOOLS REQUIRED:**

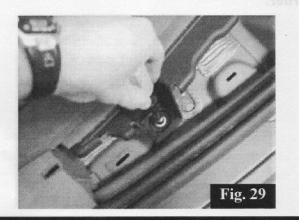

\*Ratchet\*10mm Socket\*Torx® T25 Screwdriver\*10mm Nut Driver\*Phillips Screwdriver\*Panel Removal Tool

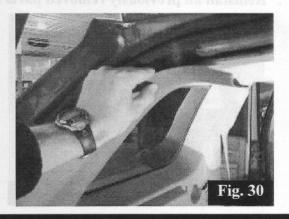

#### Jeep Grand Cherokee Eight Channel Amplifier Installation Instructions

1. Using a panel removal tool gently pry loose the plastic trim along the top and bottom of the rear hatch opening. Fig. 27 and Fig. 28

- 2. Using a 10mm nut driver remove the two nuts securing the load floor revealed by the removal lower panel. Fig. 29
- 3. Pull up and back on load floor to remove from the vehicle.
- 4. Gently snap loose the driver's side D pillar cover near the rear hatch opening. Fig. 30

#### Jeep Grand Cherokee Eight Channel Amplifier Installation Instructions continued

- 9. Pull the rubber molding loose along bottom rear portion of the driver's side rear door opening and pull up on rear quarter panel cover to release the metal fasteners. Fig. 35
- 10. Starting at the rear of the vehicle gently pull the driver's side rear quarter panel cover loose. Fig. 36
- 11. Disconnect the accessory plug wiring and remove the quarter panel cover from the vehicle.

- 12. Using a 10mm socket and ratchet remove the three nuts securing the amplifier bracket to the vehicle.
- 13. Disconnect the amplifier wiring. Fig. 37
- 14. On a workbench using a Torx® T25 screwdriver remove the four screws securing the amplifier bracket to the amplifier. Fig. 38
- 15. Attach the amplifier bracket to the upgrade amplifier and replace the screws.
- 16. Reinstall all previously removed parts in reverse order.

Dash Speaker Installation for Jeep Cherokee (continued)

- 5. Remove the screws securing the speaker, disconnect wiring and remove speaker. Fig. 33
- 6. For clearance of the connector on the upgrade speaker remove the plastic in the area indicated by the dotted line in Fig. 34.
- 7. Install the upgrade speaker making sure the connecter on the speaker is facing toward the window.
- 8. The side of the speaker with the connecter on it has to be dropped into the dash first in order for the speaker to be installed. Fig. 35
- 9. Replace the screws and tighten.
- 10. Reinstall all previously removed parts in reverse order.
- 11. Repeat process on other side of vehicle.

# **Door Speaker Installation for Jeep Cherokee**

- 1. Remove rubber pad from the bottom of the armrest pocket and remove the screw under it. Fig. 36
- 2. Remove the screw toward the top and front of the door panel and from behind the door release lever. Fig. 36
- 3. Using a panel removal tool gently pry the door panel out to release the plastic fasteners. Fig. 37
- 4. Disconnect the door handle linkage by rotating the blue plastic latch and pulling the linkage rod loose. Fig. 38
- 5. Disconnect door wiring and set door panel aside.
- 6. Remove the screws securing the speaker, disconnect wiring and remove speaker. Fig. 39
- 7. Remove the upgrade speaker from the adapter. The adapter is only used for Magnum, 300C, and Charger.
- 8. Install the upgrade speaker with the included spacer ring (P/N RISPACER), replace screws and tighten.
- 9. Reinstall all previously removed parts in reverse order.
- **10.** Repeat process on other side of vehicle.

# **TOOLS REQUIRED:**

\*Ratchet\*13mm Socket\*10mm Socket\*Phillips Screwdriver\*Panel Removal Tool\*Pliers\*Razor Knife

### **Subwoofer Installation**

- 1. Find the fuse block under the hood and open the fuse box cover.
- 2. Using a 13mm socket and ratchet loosen and remove the fuse box power supply nut.
- 3. Connect the ring terminal of the power harness to the fuse box power lug and retighten the nut. Fig. 1
- 4. Route the wire toward the rubber grommet in the fire wall where the hood release cable passes through securing with wire ties where needed.
- 5. Remove the two phillips screws securing the black plastic trim panel under the steering column. Fig. 2

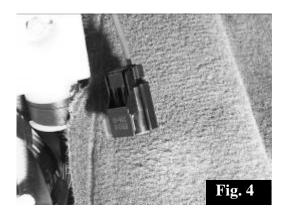

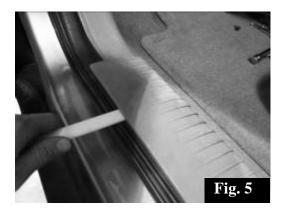

- 6. Make a hole in the grommet using a razor knife and pass the power wire through the grommet. .
- 7. Find where the wire is coming through the fire wall on the interior of the vehicle. Pull through until the protective loom over the wire just touches the grommet. Fig. 3
- 8. Install the supplied two pin connector by inserting the terminal on the end of the power wire into the back of the connector until it clicks and locks. Fig. 4
- 9. Depress the blue terminal retainer down in the center of the connector.

- 10. Using a panel removal tool gently pry up the threshold/kick panel along the bottom of the front door opening to release fasteners and remove panel. Fig. 5
- 11. Gently snap loose the driver's side kick panel. Fig. 6

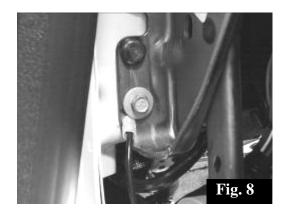

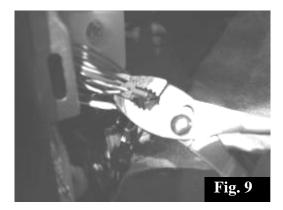

- 12. Using a panel removal tool pry the cover off of the end of the dash. Fig. 7
- 13. Find the 10mm dash bolt in the driver's side kick panel area and connect the black ground wire of the wire harness. Fig. 8

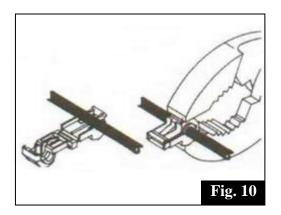

14. Locate the left front door speaker wires in the wire harness bundle next to the hood release lever. The wire colors are gray with a yellow stripe and gray with a purple stripe. Install one of the self stripping t-tap connectors on to each wire. Lay the wire in the open channel, fold the connector body over and squeeze with a pair of pliers until connector snaps shut. Fig. 9 and Fig. 10

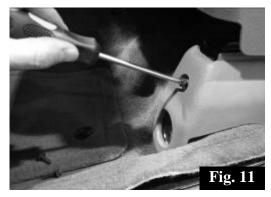

<u>Tip:</u> Once these connections have been made you might want to test the wire with an inexpensive test-tone generator to verify you have the right wires. Connect the subwoofer harness input wires to the t-tap connectors. The green wire (positive) of the harness connects to the t-tap connector on the gray wire with the yellow stripe in the vehicle. The gray wire (negative) of the harness connects to the t-tap connector on the gray wire with the purple stripe in the vehicle.

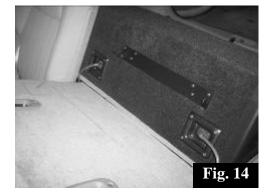

- 15. Plug the power wire connector on subwoofer harness to the connector you installed on the wires coming from the fuse block. Slide the red locking tab over to prevent the connectors from accidentally coming disconnected.
- 16. Remove the phillips screw in the front and the back of the trim panel around the bottom of the front seat. Removal of this panel makes running the harness past the B pillar area easier. Fig. 11
- **17.** Using a panel removal tool gently pry up the kick panel along the bottom of the rear door opening to release fasteners and remove panel.
- 18. Pull the rubber molding away from the rear of the front door and the front of the rear door along the edge of the B pillar cover.
- 19. Pull the cover out slightly at the bottom enough to allow the subwoofer harness to pass behind it. Fig. 12
- 20. Route the subwoofer harness along the edge to the door opening securing with wire ties where needed.

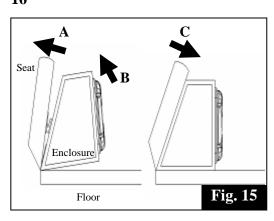

- 21. Route the wire under the rear quarter panel cover next to the edge of the rear seat and around the rear seat pivot point. If the wire is routed properly it will not get pinched by the seat mechanism. Rotate the seat back up while watching carefully to make sure there is not a point in which the wire harness may get pinched.
- 22. Set the enclosure in place making sure that it is centered.
- 23. Connect the subwoofer harness to the subwoofer. Slide the red locking tab over to prevent the connectors from accidentally coming disconnected and tuck connector beneath the edge of the load floor. Fig. 14 (Double enclosure pictured.)

- 24. While kneeling in the rear seat facing the rear of the vehicle pull the seat back release lever on the passenger's side and rotate the seat back all the way down to the flat position.
- 25. Pull the seat back release lever on the driver's side and rotate the seat back until it is nearly vertical. While holding the seatback with one hand grab the top of the enclosure with the other hand and pull it back against the seat making sure that the hooks on the bracket insert into the anchor points on the rear of the seat back. While holding the enclosure firmly against the seat back, slowly rotate the seat back toward the rear of the vehicle until it locks into the upright position. Fig. 15
- 26. Rotate the passenger's side seat back up to match the position of the driver's side The installation is complete and the subwoofer enclosure is easily removable if necessary by reversing steps 25-27. Fig. 16

27. Replace all previously removed parts in reverse order and install the supplied fuse under hood.
